Hi Cameron,

Let's see if I can answer your question...the 16g gross weight is the weight that was taken at the evidence office (it includes the 9 bags plus the evidence bag that the samples were put in from the police dept)...the gross weight of the 9 bags (without the evidence bag) was 3.7605g. I analyzed one bag. The gross weight of that bag was 1.8920g....I opened the bag and emptied the contents and then weighed the empty bag which weighed 0.2659g. I subtracted the weight of the empty bag from the gross weight of the bag analyzed (bag plus sample) and got a net weight of 1.6261g. Hopefully this helps you, but feel free to call me at the # below if you have any questions.

Thanks,

Hey Kate,

Thanks so much for getting this to me. Can you please help me understand the weights of the MDMA?

As I read it, there were 9 bags at 16 grams gross, one bag was tested, and the rock in that one bag had a rock in it that weighed 1.6 grams net? Am I right?

Or, were there similar rocks in each of the bags meaning that there was more than 1 rock total, with a weight of more than 1.6 grams total?

Hopefully I am not confusing you also. Maybe we should speak over the phone, and if so, when do you think you might be free?

Thanks, sorry to bother you with this.

Cameron

Attached is a copy of the lab notes you requested for the above mentioned case. If you need any additional info please let me know.

Thanks,
